

An aerial photograph of a large commercial airplane, likely a Boeing 747, parked on an asphalt tarmac. The aircraft is oriented diagonally from the top left towards the bottom right. The word "SITA" is superimposed in large, bold, white capital letters across the center of the aircraft's fuselage. The tarmac features yellow and red painted lines, and a grassy area is visible on the right side.

SITA AEROCOST MANAGER POWERED BY MAUREVA KEOPS

SITA AeroCost Manager: Managing the Costs.

The air transport industry (ATI) faces growing challenges in DOC invoice management, including inconsistent control levels, limited visibility across decentralized systems, and significant variations in payment timelines. These issues create blind spots that hinder accurate accruals and budgeting, increase the risk of fraud, and turn invoice processing into a cost center rather than a strategic control point.

To address these challenges, SITA and Maureva have joined forces and introduced SITA AeroCost Manager - a centralized Direct Operation Cost (DOC) invoice management solution that resolves financial challenges the airlines face.

SITA AeroCost Manager: Built to Meet the Real-World Needs of Airlines.

AeroCost Manager, powered by Maureva Keops, unlocks a new era of efficiency and control. A future where every invoice is automatically validated, with full fleet-wide visibility, and intelligent control. Empowering each controller to manage up to 20 aircraft with ease - and unlock over \$1M in savings per 10 aircraft.

Industry Challenges:

- **Inconsistent and often weak invoice control levels:** Leading to errors, duplicate payments, and missed cost-saving opportunities.
- **Lack of visibility over controlling:** Without centralized oversight, finance teams struggle to track and validate spending in real time.
- **Significant variations in invoice payment timelines:** Delays can strain supplier relationships and disrupt cash flow planning.
- **Challenges in generating accruals and establishing a budget:** Limited data accuracy and manual invoice processing.
- **Decentralization creates blind spots and creates precedents for fraud:** Unnoticed discrepancies and compliance issues.

Key features include:

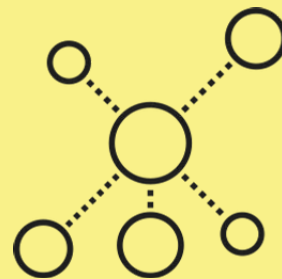

- **Tariffs Management:** Public tariffs service for automatic updates within your AeroCost Manager environment.
- **Calculate Accruals:** Detailed provisional costs are calculated for each operated flight, based on actual tariffs and operational data.
- **Invoice Control:** Loading and validation of providers invoices, enabling discrepancy checks and claims.
- **Budgetization:** Generate cost forecasts, possible for multiple flight planning scenarios, based on actual tariffs and budget assumptions parameters.

Centralization of Cost Data

Improved visibility regarding DOC.

Automation & Standardization

Automated invoice approval process

Reduced Invoice Processing Costs

Shortened processing time.

Improved Budget & Forecast Accuracy

Efficient process maximizing time.
