

# SITA ADVANCE PASSENGER PROCESSING

## Take control before take-off: Screen passengers in real-time. Keep borders safe.

Border agencies face rising traveler volumes, complex risk environments, and fast-changing regulations. ICAO Annex 9 – 9.16, recommends implementing iAPI, but global adoption is uneven. Many existing systems are reactive, costly, and slow to adapt.

**SITA Advance Passenger Processing (APP)** changes that. It gives governments the power to decide, before departure, who can board and who cannot - bringing control, speed, and risk management into a single system.

Without agility to respond to real-time information, risks grow and bottlenecks increase. Inaction worsens the situation, making borders more vulnerable and travelers unhappy.

## Unlocking value with SITA Advance Passenger Processing

Detect critical threats

Prevent high-risk individuals from entering or leaving your country

Stay in control

Ensure only authorized travellers can board

Travelers move through faster

Streamline border control

Government self-service

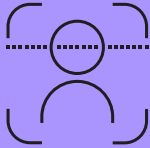

Make quick changes to entry criteria

# How SITA Advance Passenger Processing works

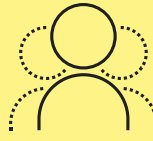

Imagine managing a busy border control agency with thousands of travelers arriving daily, each one a potential security risk. SITA APP transforms this overwhelming process into a smooth operation. **Here's how it works:**

Passenger data comes in straight from the carrier at check in.

APP checks it in real time against watchlists, visa databases, and more.

APP automatically clears travelers or denies boarding based on real-time risk rules.

The carrier gets the answer in seconds: board or no board.

## SITA APP at a major event

**1.5m**

travelers were screened

**350**

travelers were flagged

**60**

travelers were stopped from boarding

**That's proactive border security in action.**

## SITA is different

**1**

**Smarter screening**  
Stop high-risk travelers instantly

**2**

**Adapt quickly**  
Update policies in just days

**3**

**Deploy fast**  
Works with 700+ carriers globally

**4**

**Universal access**  
Supports air, private, and maritime

**5**

**Start small or go big**  
Cloud or on-prem and the integrations you need – your choice

**6**

**Easy to plug in**  
Connects easily with all your border systems

## Why SITA?

We've done more iAPI setups than anyone else – we know this space inside out- with over half of the world's implementations and more than 650 million messages processed annually.

Our expertise in border digitalization and our robust system ensures quick setup and rapid value realization. Supported by a fully managed airline engagement process, SITA simplifies the complex ecosystem of border security and passenger processing.

## Need to know more?

Modernize your border security and passenger screening with SITA APP.
