

SITA API PNR GATEWAY FOR GOVERNMENTS

All the vital traveler data your government needs.

Checking traveler data manually on arrival leaves countries exposed. It puts border officials under pressure, frustrates passengers, compromises national security and risks non-compliance with international mandates designed to fight global terrorism and transnational organized crime.

Instead, governments need timely access to correct, complete, quality and consolidated passenger data so they can make smart decisions - fast.

They need a managed, standards-compliant gateway that acquires, validates, normalizes and routes vital traveler data from carriers to government systems. Plus, they need user-friendly web portals and visual dashboard overviews for both airlines and government users – systems that facilitate easier message views, access to traveler and journey data, as well as report generation and audit capabilities.

Targeted action

By improving data quality and timeliness, API PNR data helps agencies coordinate earlier interventions alongside specialist anti-trafficking units.

Fraud detection

API PNR data, used alongside customs and intelligence sources, can help agencies target traveler-borne smuggling risks earlier.

Stopping threats

Access to timely and quality real-time traveler data helps authorities act sooner, well before arrival.

The new way forward

SITA API PNR Gateway takes raw data sent in a variety of standard message formats from all around the world, and transforms it into a single feed. This gives governments and their agencies access to all the crucial passenger information needed to conduct in-depth intelligence analysis and risk assessments.

This data is gathered across the passenger journey and comes in three core forms:

- **Advance Passenger Information (API):** Collected during check-in and shared with governments on departure, this information includes passport and flight details.
- **Passenger Name Record (PNR):** Created once a booking has been made. Selected data, based on permitted data fields, is gathered. This information is shared with governments in batches, based on their timeframe requirements.
- **Departure Control System (DCS):** Generated when the traveler is at the airport, DCS includes boarding information, baggage details and seat assignment.

Unlocking value with SITA API PNR Gateway

Unlocking value with SITA API PNR Gateway

- **Earlier risk review.** Data arrives complete, on time and in the right format.
- **Fewer false alarms.** Quality data complete with semantic checks.
- **Less manual re-work.** Multiple views of the same data, organized by message and journey.
- **Make sense of raw data.** Select the correct format for analysis.
- **Single data feed.** Access all critical traveler data in one place.
- **Ensures quality.** Correct, complete and timely, the integrity of data is ensured.
- **Meet your international obligations.** Conform to ICAO's Annex 9, United Nations Security Council obligations, as well as IATA and World Customs Organization standards.
- **Supports threat detection.** Works with SITA Intelligence & Targeting or a similar, risk assessment solution of your choice.

SITA is different

- ➔ We process more than **100 million PNR** messages and **15 million API** messages each year.
- ➔ We make it easier for **more than 70 governments** and **over 700 airlines** to share vital information that affects security, operations and traveler peace of mind.
- ➔ We provide the **trusted data**, so **you can control the risk**.

Why SITA?

SITA API PNR Gateway **transforms raw traveler data into the correct format** and shares it with governments via a **single data feed**. Governments can use this correct, complete and quality data to **the extract crucial intelligence** needed to make **fast, accurate threat assessments**. In the process, governments can **streamline border processes, improve national security** and **confidently fulfil their international obligations**.

Need to know more?

Reliable, quality traveler information is the cornerstone that supports the digital travel revolution. Outdated systems no longer have what it takes, but SITA API PNR Gateway does.

It's time to modernize.
