

# SITA AUTOMATED BORDER CONTROL

## From manual checks to automated trust at the border.

**Air travel numbers are surging. By 2040 alone, 8 billion people are expected to take to the skies.**

That's not just an epic logistical challenge for airports and airlines, but a massive surge in people processing for border control authorities who still rely on manual processes.

Lengthy checks, long queues, and inconsistent processes stretch resources and frustrate travelers, especially during peak periods. Immigration officers are tied up with repetitive tasks, leaving less time for high-risk cases. Meanwhile, airports demand faster throughput without compromising security or compliance. It's time for borders to evolve.

**But how?** Imagine a different approach – one that harnesses the power of modern technology and automation to accelerate the flow of low-risk passengers and automate routine border officer tasks.

SITA's Automated Border Control (ABC) Gates and Kiosks transform border operations by replacing manual checks with fast, secure self-service transactions. They reduce queue times, applying advanced biometrics and document authentication to ensure consistent, high-integrity identity checks. By enabling one border officer to supervise multiple passengers being processed simultaneously, SITA ABC solution frees officers to focus on complex cases and real threats.

## Unlocking value with SITA Border Control

Improved security & standards compliance

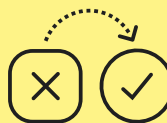

High-quality biometrics and document verification ensure compliance with the industry regulations

Operational efficiency

Optimized resource allocation with one officer monitoring multiple touchpoints simultaneously

Easy integration & operation

Smooth integration with customer border management systems and other SITA border products

Enhanced user experience

Intuitive and ergonomic product interactions reduce error-prone actions and transaction times

# SITA Automated Border Control

A flexible set of **ABC Gate and Kiosk** configurations designed to support diverse operational needs, while ensuring secure and user-friendly passenger processing.

## Management tools

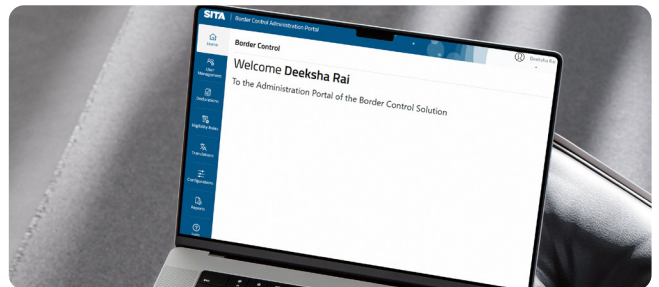

### Monitoring Station

Empowers border officers to oversee and control multiple ABC units from a single interface, enhancing operational oversight and efficiency.

### Admin Portal

Streamlines system configuration and provides actionable insights through integrated reporting.

### Integration

SITA ABC products natively integrate with SITA Travel Authorization (TA) and SITA Intelligence & Targeting, creating a secure, efficient digital clearance ecosystem.

This seamless integration ensures high performance, simplifies maintenance, and reduces overall integration costs.

25+

years of invaluable  
experience at  
our disposal

70+

governments  
around the world  
trust our solutions

### Why SITA?

With over 160 ABC Gates and 230 ABC Kiosks deployed across 10 countries, SITA delivers border automation solutions trusted by governments worldwide.
