SITA Policy commitment for Budapest Airport

Airport Partner Carbon Recognition

SITA commits to reducing its absolute Scope 1 and Scope 2 greenhouse gas emissions from operations at Budapest Airport (BUD) by at least 40% by 2030, compared with a 2025 base year of 2.34 tCO2e using the market-based accounting method.

This commitment supports SITA's application for Silver-level recognition under the Airport Partner Carbon Recognition programme and is aligned with SITA's corporate climate commitments, including its SBTi net-zero ambition for 2050.

This commitment covers all activities, assets and operations under SITA's operational control.

In keeping with full transparency and demonstrable commitment to this undertaking, we will publicly disclose Scope 1 and 2 emissions annually and inform stakeholders of our progress toward our 2030 carbon reduction target.

Sergio Colella

President Europe
