

iBorders FastStart

The world's first all-in-one traveler screening system

iBorders FastStart is a cost-effective solution, the result of over 20 years' experience. It's quick to deploy and provides global border control solutions

ISSUES

- **Multiple stakeholders**

How do you incorporate the needs of all your stakeholders into one system everyone can use?

- **Balance security risk with passenger experience**

How can you ensure your border is safe and secure while minimizing disruption and delays for travelers (passengers and crew)?

- **Actionable intelligence**

How do you sift through data in different formats delivered at different times? This makes it difficult to give your agencies intelligence they can work with.

- **Data validity**

Airline data can contain errors. How can you be certain of the data's quality so that you can quickly apply intelligence and achieve actionable results?

SOLUTION

iBorders FastStart gives governments a ready-made solution that plugs into all their border control stakeholders' systems for easy deployment.

It lets you consolidate information from multiple airlines into a single feed.

With data quality at its heart, errors are quickly highlighted. This allows for fast risk assessment and identity management, with actionable intelligence in real time.

By identifying high-risk travelers while quickly processing the low-risk majority, you can deliver a safe and secure border.

BENEFITS

- Deployed in as little as 12 weeks
- Lets security and border control agencies share information
- Designed to grow as future demands increase
- Opportunity to expand operations to iBorders Advanced Solutions

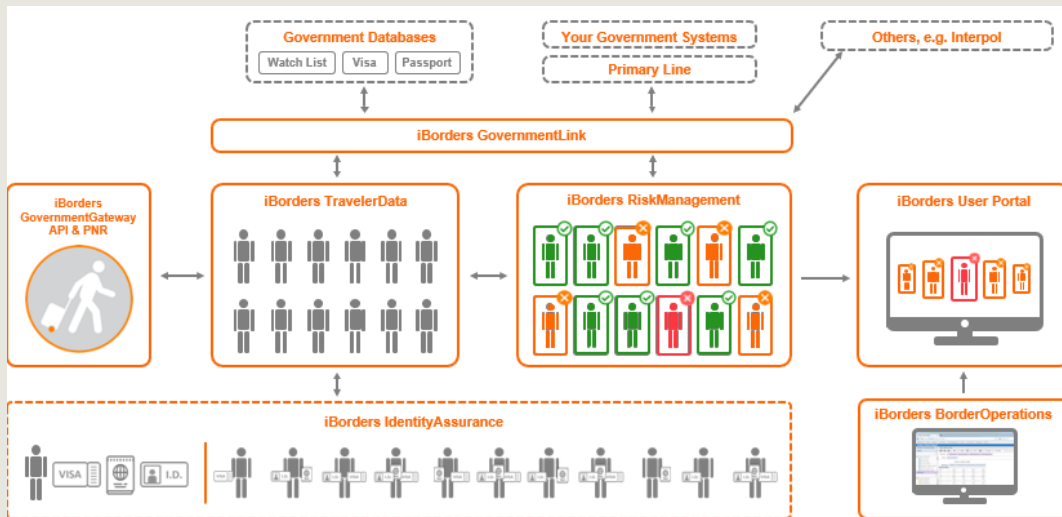

RESULTS

- Fast, automated risk assessment and identity management on all information provided in real time.
- Faster processing of low-risk, legitimate travelers for tourism and trade.
- Full carrier engagement ensures complete coverage on all travelers entering, leaving and traveling through your country, consolidated into a single window view.

1.5 billion
messages received
through iBorders
FastStart each year
(PNR, iAPI and API
data)

400+
airlines enrolled who
supply information to
iBorders FastStart

HOW DOES IT WORK?

- Receives carrier information on all travelers
- Integrates with government visa, passport, and watch lists
- Runs risk assessment and identity assurance on all travelers
- Provides intelligence that separates travelers into high-risk and low-risk groups and those that need further investigation

SOLUTION COMPONENTS

1. iBorders TravelerData

Provides security agencies with a single data feed for all travelers traveling to, from or through a country.

2. iBorders GovernmentLink

Ensures all security and border control agencies can link passport, visa and watchlists to SITA iBorders FastStart.

3. iBorders RiskManagement

Runs real-time risk assessment on all travelers, finding unknown threats and prioritizing them for review.

4. iBorders BorderOperations

Provides live, predictive and retrospective insight into border effectiveness, allowing a country to adjust resources as required.

5. iBorders User Portal

Lets you login and access the system's products and functionality. It also lets you set user access levels depending on job function and security clearance.
