

iBorders® INSIGHT

COMPLETE SITUATIONAL AWARENESS OF THE BORDER

How can governments build a comprehensive view of their border management operations, use resources effectively, and know precisely who and what is crossing the border at any given time?

ISSUES

With limited resources available, it's paramount for governments to optimize operations at their borders.

They need to make timely and well-informed decisions, ensure systems are available and deploy resources where and when they are needed most. However this can only be achieved by having a real-time, and predictive, comprehensive view of all their border's activities.

SOLUTION

SITA's iBorders® Insight ensures government agencies have complete situational awareness of their borders from an operational and performance perspective. Aggregating data from multiple agencies and external sources it delivers real-time insight on border operations at all entry and exit points.

iBorders BorderOperations powers collaborative decision-making and risk-based targeting of resources through the visualization of travelers' status, areas of risk and any changes in real-time to keep the border secure.

iBorders BorderPerformance ensures governments have the comprehensive data analytics that not only show current and past border performance, but also support better and more predictive planning of operations based on the historical trends.

BENEFITS

- Enhanced ability to visualize, predict and react to changing threat environments.
- Multiple government agencies are able to securely access high-quality information, thus driving timely analysis and collaborative decision making.
- Advanced reporting and analysis tools provide statistically-based views of current, past and predicted future trends, in order to help drive efficient risk-based resource allocation and reliable performance reporting.
- Full integration with iBorders® broader portfolio.

One government in the Middle East uses iBorders Insight to centrally manage their air border operation, facilitating

30+
million

border crossings each year.

HOW DOES IT WORK?

iBorders BorderOperations RiskTracker

iBorders BorderPerformance Dashboard

CASE STUDY

Governments globally are using iBorders Insight to gain full visibility of their entire border operations 24/7, from simple changes in flow of good and people to the identification of risks and associated changes in real-time.

iBorders BorderOperations

In the Middle East, one government uses iBorders BorderOperations to achieve accurate, reliable and timely visibility of their day-to-day border operations. iBorders BorderOperations is a key component of the customer's border command and control center, including a video wall displaying all active flights and risks visualized on an integrated map. As a result, they are able to immediately identify emerging threats and prioritize resources accordingly.

iBorders BorderPerformance

Multiple governments around the world use iBorders BorderPerformance to identify trends in expected and actual border movements and flagged risks, detecting anomalies and adapting to specific threat profiles. A comprehensive data exploration facility enables the analysis of a wide range of issues including threat analysis, airline compliance and resource allocation. Targeting performance is optimized in alignment with the resources required to process identified threats.
